Dynamic Learning v2 Tutorial 3: Exploring page-based titles

Different types of page-based title in DLv2

1. Whiteboard eTextbooks

Whiteboard eTextbooks are designed for use by teachers at the front of classrooms.

The new generation of these eTextbooks can also be viewed on tablets (look out for the iPad-compatible icon).

eTextbooks developed for DLv1, however, won’t work on iPads as their pages are created in Flash. These will continue to work on all PCs where Flash is installed.

Whiteboard eTextbooks cannot be shared with students as they are for teacher use only.

They have a fixed layout in double page spreads, just like the student books they are based on, but the pages can be zoomed and searched.

When you click on a Whiteboard eTextbook from the dashboard, it will open up a Pages screen with a contents menu, and show you the thumbnails that belong to the different sections.

Clicking one of these thumbnails will take you to that page. See below.
Opening related page resources for a whiteboard eTextbook

If you see a Resources icon at the foot of a page, click it to open up a scrollable list of all the related resources that will help you deliver lessons effectively. Click it again to hide the resources list.

Zoom the page view

Click and hold on this zoom slider to enlarge the page.

Simply click on the page to turn the cursor into a magnifying glass. Then use the zoom slider, which will now appear, to increase the magnification.

Hold down and drag to move to the part of the screen you want.
2. Teaching and Learning Resources

Teaching and Learning Resources, especially those legacy titles that were developed as part of DLv1, may also have pages.

If the title tile does not display the ‘iPad-compatible’ icon, however, you’ll need Flash installed to view them.

Look out for the Pages tab when you open the title, and click on one of the thumbnails to go to that page.

Once you are on the page, use the zoom function to focus closely on the image or text you want, and the forward and back arrows or ‘Go to page’ panel to navigate.
Clicking Zoom will prompt you to go to full screen mode, and the cursor will change to a marquee tool, allowing you to home in on the area you are examining.

These page images are also interactive. Mouse over the page and you’ll see links to images and other text documents. Click and open or download them, depending on your browser, and view them in a separate window.
3. Student eTextbooks

New, reflowable layout Student eTextbooks, readable on iPads and other tablets, are coming soon. Watch out for more details.
