<i>Getting the most from this book</i>	iv	Practice questions 1	122
<i>Prior knowledge</i>	vi		
1 Matrices and transformations	1	7 Further calculus	124
1 Matrices	2	1 Volumes of revolution	124
2 Multiplication of matrices	6	2 The mean value of a function	132
3 Transformations	13	8 Complex numbers and geometry	136
4 Successive transformations	27	1 The modulus and argument of a complex number	137
5 Invariance	33	2 Multiplying and dividing complex numbers in modulus-argument form	145
2 Introduction to complex numbers	39	3 Loci in the Argand diagram	149
1 Extending the number system	40	9 Polar coordinates	162
2 Division of complex numbers	44	1 Polar coordinates	162
3 Representing complex numbers geometrically	47	2 Sketching curves with polar equations	167
3 Roots of polynomials	52	10 Rational functions and further algebra	173
1 Polynomials	53	1 Graphs of rational functions	174
2 Cubic equations	58	2 Inequalities	185
3 Quartic equations	62	11 The determinant of a matrix	195
4 Solving polynomial equations with complex roots	65	1 The determinant of a matrix	196
4 Conics	71	2 The inverse of a matrix	201
1 Equidistant from a point and a line	71	3 Using matrices to solve simultaneous equations	207
2 Cutting a double cone	73	12 Vectors and 3D space	212
3 Conics and transformations TOFL	76	1 Review: Working with vectors	213
5 Hyperbolic functions	79	2 The vector equation of a line	220
1 Hyperbolic functions	79	3 Finding distances	232
2 Inverse hyperbolic functions	84	Practice questions 2	242
6 Sequences and series	92	An introduction to radians	244
1 Sequences and series	93	The identities $\sin(\theta \pm \phi)$ and $\cos(\theta \pm \phi)$	247
2 Using standard results	98	<i>Answers</i>	249
3 The method of differences	101	<i>Index</i>	000
4 Proof by induction	106		
5 Polynomial approximations and Maclaurin series	115
