

*Getting the most from this book*

## **1 Statistical problem solving**

---

1.1 The problem solving cycle

## **2 Discrete random variables**

---

2.1 Notation and conditions for a discrete random variable

2.2 Expectation and variance

## **3 Discrete probability distributions**

---

3.1 The binomial distribution

3.2 The Poisson distribution

3.3 Link between binomial and Poisson distributions

3.4 Other discrete distributions

## **4 Bivariate data (correlation coefficients)**

---

4.1 Describing variables

4.2 Interpreting scatter diagrams

4.3 Product moment correlation

4.4 Rank correlation

## **5 Bivariate data (regression lines)**

---

5.1 The least squares regression line (random on non-random)

5.2 The least squares regression line (random on random)

## **6 Chi-squared tests**

---

6.1 The chi-squared test for a contingency table

6.2 Goodness of fit tests

## **7 Conditional probability**

---

7.1 Screening tests

7.2 Bayes' theorem

## **8 Continuous random variables**

---

8.1 Probability density function

8.2 Expectation and variance

8.3 The median

8.4 The mode

8.5 The continuous uniform (rectangular) distribution

8.6 The exponential distribution

8.7 The expectation and variance of a function of  $X$

8.8 The cumulative distribution function

## 9 The normal distribution

---

- 9.1 The sums and differences of normal variables
- 9.2 Modelling discrete situations
- 9.3 More than two independent random variables
- 9.4 The distribution of the sample mean
- 9.5 The central limit theorem

## 10 Confidence intervals

---

- 10.1 The theory of confidence intervals
- 10.2 Interpreting sample data using the  $t$  distribution

## 11 Hypothesis tests

---

- 11.1 Hypothesis testing on a sample mean using the Normal distribution
- 11.2 Large samples
- 11.3 Hypothesis testing on a sample mean using the  $t$  distribution
- 11.4 The Wilcoxon signed rank test on a sample median

## 12 Simulation

---

- 12.1 Simulating discrete uniform distributions
- 12.2 Simulating continuous uniform distributions
- 12.3 Simulating normal distributions
- 12.4 Simulating other distributions
- 12.5 Simulation and the central limit theorem
