

Contents

Getting the most from this book

1	Complex numbers	01
1.1	Extending the number system	02
1.2	Division of complex numbers	07
1.3	Representing complex numbers geometrically	10
2	Matrices and transformations	15
2.1	Matrices	16
2.2	Multiplication of matrices	20
2.3	Transformation	27
2.4	Successive transformations	41
2.5	Invariance	47
3	Roots of polynomials	54
3.1	Polynomials	55
3.2	Cubic equations	60
3.3	Quartic equations	64
3.4	Solving polynomial equations with complex roots	67
4	Induction	73
4.1	Proof by induction	74
	Practice questions Pure Further Mathematics 1	82
5	Complex numbers and geometry	84
5.1	The modulus and argument of a complex number	85
5.2	Multiplying and dividing complex numbers in modulus-argument form	93
5.3	Loci in the Argand diagram	97
6	Matrices and their inverses	110
6.1	The determinant of a matrix	111
6.2	The inverse of a matrix	117

Contents

6.3	Using matrices to solve simultaneous equations	123
7	Vectors and 3D space	129
7.1	Finding the angle between two vectors	129
7.2	The vector equation of a line	136
7.3	The vector (cross) product	149
	Practice questions Pure Further Mathematics 2	157
	An introduction to radians	159
	The identities $\sin(\theta \pm \phi)$ and $\cos(\theta \pm \phi)$	162
	Answers	164
	Index	00
